

SULPHATE SCALE TOOL (SST) – MODEL SULPHATE AND HALITE SCALE PRECIPITATION POTENTIAL

Together with [Scale Consult](#), and their acknowledged [ScaleSim](#) software, an online water modelling tool has been developed inside [scaleman.online](#). Sulphate and Halite scale potential can be modeled in fast and user-friendly software. Registered users in [scaleman.online](#) from companies that are purchasing the BSA service from Scale Protection can subscribe for a license to use the new tool.

The SST has an easy user interface with the option to import water ion data from xl, by typing and to save and load from a personal online database. The tool does not need any local software installation, it's all online. Calculation for a single water or from mixing two waters is available. The output will be displayed by graphs and tables, as well as download to xl.

Excel file water data
